AI-ASSISTED EMERGENCY FUND SUMMARY

Your emergency fund of $22,500 meets or exceeds your 5-month target of $21,000, based on $4,200/month in essential expenses. Current coverage: 5.4 months. Emergency Readiness Score: 96/100 (Excellent).

With stable income, a 3-4 month fund is a common minimum target. Recommended coverage for your income profile: 3-4 months.

Your emergency fund is the financial safety net that prevents debt accumulation during job loss, medical events, or major unexpected expenses. With your current fund meeting the target, focus on keeping it accessible in a liquid account and reviewing the target as your expenses change. This calculator does not model interest earned on savings -- adding a high-yield savings account or HYSA to your fund can accelerate the timeline.

INPUTS & ASSUMPTIONS

Monthly Essential Expenses	**$4,200**
Current Emergency Savings	**$22,500**
Monthly Contribution	**$200.00**
Income Stability	**Stable**
Target Coverage	**5 months**
Region	**United States**

DETAILED RESULTS

Fund Target	**$21,000**
Current Coverage	**5.4 months**
Target Progress	**100%**
Surplus	**$1,500**
Months to Target	**Goal achieved**
Suggested Monthly	**$200.00**
Recommended Coverage	**3-4 months**
Readiness Score	**96/100 (Excellent)**

KEY DRIVERS / POSSIBLE ADJUSTMENTS

- Monthly expenses of $4,200 directly set the fund target (5 months = $21,000). Reducing essential expenses lowers the required fund and reduces the time to reach it.
- Monthly contribution of $200.00/month closes the $0 gap in approximately 0 mo.
- Target coverage of 5 months (3-4 months recommended for Stable income). Increasing the target to 9-12 months is prudent for variable income or single-income households.

METHODOLOGY

What this calculator models:

- Fund target = target months x monthly essential expenses. Current coverage months = current savings / monthly expenses.
- Months to target = gap / monthly contribution (linear, no interest modeled). Suggested monthly = gap / 12 when contribution = 0.
- Readiness Score (0-100) based on target progress percentage. Income stability drives the recommended coverage range (Stable: 3-4 mo; Moderate: 4-6 mo; Variable: 9-12 mo).

What this calculator does not model:

- Interest earned on savings (a high-yield savings account reduces time to target).
- Variable or irregular contribution amounts.
- Inflation on expenses or target over time.
- Simultaneous debt repayment trade-off analysis.
- Insurance coverage that may reduce the required fund size.
- Joint vs individual household income considerations.

EDUCATIONAL DISCLAIMER

This report is for educational and illustrative purposes only. The emergency fund target and timeline are estimates based on the inputs provided and do not account for interest earned, unexpected expense changes, or individual financial circumstances. This does not constitute financial, insurance, or debt counselling advice. Consult a qualified financial advisor to assess your specific emergency preparedness needs.
