AI-ASSISTED MORTGAGE SUMMARY

Your 25-year mortgage on a CA\$650,000 property carries a loan of CA\$520,000. At 5.25%, total interest over the amortization period is CA\$409,632 — 79% of the mortgage principal. Mortgage Health Score: 93/100 (Excellent).

Your Monthly (12×/year) payment of CA\$3,098.77 covers principal and interest. Including CA\$400.00/mo property tax, CA\$116.67/mo home insurance, total estimated monthly housing costs are CA\$3,615.44.

Score based on down payment, insurance status, and rate. A 7.25% rate at renewal would increase your monthly payment by CA\$624.00.

INPUTS & ASSUMPTIONS

Property Price	CA\$650,000
Down Payment	CA\$130,000 (20.0%)
Annual Interest Rate	5.25%
Amortization Period	25 years
Payment Frequency	Monthly (12×/year)
Annual Property Tax	CA\$4,800
Annual Home Insurance	CA\$1,400
Interest Compounding	Semi-annual (Canadian Interest Act)

MORTGAGE BREAKDOWN

Total Mortgage Amount	CA\$520,000
Base Monthly P&I Payment	CA\$3,098.77/month
Monthly Payment	CA\$3,098.77
Total Monthly Housing Cost	CA\$3,615.44/month
Total Interest Paid	CA\$409,632
Total Mortgage Cost	CA\$929,632
Balance After Year 5	CA\$462,027
Balance at Midpoint (Year 13)	CA\$331,552
Mortgage Health Score	93/100 (Excellent)

KEY DRIVERS / POSSIBLE ADJUSTMENTS

- Rate renewal exposure: if your rate increases to 7.25% at renewal, your monthly payment would rise by approximately CA\$624.00. Building a payment buffer or locking into a longer term may reduce this risk.
- Consider payment frequency: switching from monthly to accelerated bi-weekly payments effectively adds one extra monthly payment per year, reducing interest and shortening amortization without changing your budget significantly.
- Review your amortization period at renewal. A shorter term increases payments but reduces total interest cost — compare the 15, 20, and 25-year scenarios side by side to see the trade-off.

METHODOLOGY

What this calculator models:

- Converts the quoted annual mortgage rate to an equivalent payment-period rate using Canadian semi-annual compounding.
- Calculates the regular mortgage payment using the standard present-value annuity formula, then converts to bi-weekly or accelerated bi-weekly using the approved frequency multipliers.
- Computes CMHC mortgage default insurance premiums at the applicable tier (4.00% at <10% down, 3.10% at 10–14.99%, 2.80% at 15–19.99%) and adds the premium to the mortgage balance.
- Builds a year-by-year amortization schedule with extra monthly payments applied directly to principal, reporting annual interest, principal, and remaining balance.
- Computes the Mortgage Health Score from GDS/TDS ratios and down payment percentage (when income is entered) or from down payment, CMHC insurance status, and rate (when income is not entered).

What this calculator does not model:

- Property Transfer Tax, Land Transfer Tax, legal fees, or other closing costs.
- Mortgage term length — this report models the full amortization at the quoted rate, not a specific 2-or-5-year term.
- Rate changes at renewal — the rate is held constant for the full amortization period.

EDUCATIONAL DISCLAIMER

This report is for illustrative and educational purposes only. Mortgage payment, interest, CMHC insurance, GDS/TDS ratio, and Mortgage Health Score calculations are estimates and may differ from amounts quoted by a lender. Canadian mortgage interest compounds semi-annually per the Interest Act; actual payment amounts depend on your lender's specific calculation methods. CMHC premium rates are current at time of calculation and subject to change. GDS and TDS ratios use an estimated heating cost and may not reflect your actual expenses. Results do not constitute financial, mortgage, lending, tax, or legal advice. Consult a licensed mortgage professional or financial advisor before making any mortgage or property purchase decisions.
