EXECUTIVE SUMMARY

Building Fund

CA\$10,500	CA\$5,000	1.4 mo	CA\$5,500	43/100
Fund Target	Current Savings	Current Coverage	Gap	Readiness Score
				Poor

EMERGENCY FUND PROGRESS

Total projected: CA\$10,500

Current Savings: CA\$5,000 (47.6%)	Remaining Gap: CA\$5,500 (52.4%)
------------------------------------	----------------------------------

AI-ASSISTED EMERGENCY FUND SUMMARY

Based on CA\$3,500/month in essential expenses and a 3-month target, your emergency fund goal is CA\$10,500. Current savings of CA\$5,000 covers 1.4 months (48% of target). Gap remaining: CA\$5,500. Emergency Readiness Score: 43/100 (Poor).

With stable income, a 3-4 month fund is a common minimum target. Recommended coverage for your income profile: 3-4 months. At CA\$400.00/month, you reach your target in approximately 1 yr 2 mo.

Your emergency fund is the financial safety net that prevents debt accumulation during job loss, medical events, or major unexpected expenses. Prioritize building this fund before increasing investment contributions, as emergency debt (typically at high rates) can erode long-term financial progress faster than the opportunity cost of lower investment returns. This calculator does not model interest earned on savings -- adding a high-yield savings account or HYSA to your fund can accelerate the timeline.

INPUTS & ASSUMPTIONS

Monthly Essential Expenses	CA\$3,500
Current Emergency Savings	CA\$5,000
Monthly Contribution	CA\$400.00
Income Stability	Stable
Target Coverage	3 months
Region	Canada

DETAILED RESULTS

Fund Target	CA\$10,500
Current Coverage	1.4 months
Target Progress	48%
Remaining Gap	CA\$5,500
Months to Target	1 yr 2 mo
Suggested Monthly	CA\$400.00
Recommended Coverage	3-4 months
Readiness Score	43/100 (Poor)

KEY DRIVERS / POSSIBLE ADJUSTMENTS

- Monthly expenses of CA\$3,500 directly set the fund target (3 months = CA\$10,500). Reducing essential expenses lowers the required fund and reduces the time to reach it.
- Monthly contribution of CA\$400.00/month closes the CA\$5,500 gap in approximately 1 yr 2 mo.
- Target coverage of 3 months (3-4 months recommended for Stable income). Increasing the target to 9-12 months is prudent for variable income or single-income households.

METHODOLOGY

What this calculator models:

- Fund target = target months x monthly essential expenses. Current coverage months = current savings / monthly expenses.
- Months to target = gap / monthly contribution (linear, no interest modeled). Suggested monthly = gap / 12 when contribution = 0.
- Readiness Score (0-100) based on target progress percentage. Income stability drives the recommended coverage range (Stable: 3-4 mo; Moderate: 4-6 mo; Variable: 9-12 mo).

What this calculator does not model:

- Interest earned on savings (a high-yield savings account reduces time to target).
- Variable or irregular contribution amounts.
- Inflation on expenses or target over time.
- Simultaneous debt repayment trade-off analysis.
- Insurance coverage that may reduce the required fund size.
- Joint vs individual household income considerations.

EDUCATIONAL DISCLAIMER

This report is for educational and illustrative purposes only. The emergency fund target and timeline are estimates based on the inputs provided and do not account for interest earned, unexpected expense changes, or individual financial circumstances. This does not constitute financial, insurance, or debt counselling advice. Consult a qualified financial advisor to assess your specific emergency preparedness needs.
