AI-ASSISTED INCOME TAX SUMMARY

Based on 2025 federal tax brackets for United States, your estimated income tax on \$95,000 gross income is \$17,264 (18.2% effective rate). The Single standard deduction of \$15,000 reduces federal taxable income to \$80,000. Estimated after-tax income: \$77,736 (\$6,478.00/month). Take-Home Clarity Score: 93/100 (Low Deduction Load).

Federal income tax: \$12,514. Estimated state/local tax (5.0%): \$4,750. Total: \$17,264. Marginal federal rate at this income level: 22% (\$48,475 - \$103,350). The marginal rate applies only to income above the bracket threshold, not to all income.

This estimate uses 2025 federal brackets and a manual state/local rate for educational illustration. It does not account for FICA/Medicare taxes, 401(k) deductions, itemized deductions, alternative minimum tax (AMT), or state-specific credits. Actual tax owing depends on your full return. Consult a tax professional for precise filing.

INPUTS & ASSUMPTIONS

Gross Income	\$95,000
Tax Year	2025
Filing Status	Single
State/Local Rate	5.0%
Standard Deduction	\$15,000
Region	United States

DETAILED RESULTS

Gross Income	\$95,000
Federal Income Tax	\$12,514
State/Local Tax	\$4,750
Est. Total Tax	\$17,264
Est. After-Tax Income	\$77,736
Monthly Take-Home	\$6,478.00
Effective Tax Rate	18.2%
Marginal Federal Rate	22%
Income Band	\$48,475 - \$103,350
Take-Home Clarity Score	93/100 (Low Deduction Load)

KEY DRIVERS / POSSIBLE ADJUSTMENTS

- Your effective tax rate of 18.2% reflects the blended average across all brackets -- not your marginal rate of 22%. The effective rate is what matters for overall tax burden comparison.
- State/local tax at 5.0% adds \$4,750 to federal tax. State rates range from 0% to over 13% -- this is a major factor in comparing after-tax income across states.
- Your after-tax monthly income of \$6,478.00/month is the most actionable output for budgeting. Consider using this figure rather than gross income when planning fixed expenses or savings rates.

METHODOLOGY

What this calculator models:

- Applies 2025 US federal progressive tax brackets. Standard deduction applied (Single: \$15,000; MFJ: \$30,000) to reduce taxable income before bracket calculation. State/local tax applied as a flat rate on gross income.
- Effective tax rate = total tax / gross income. Marginal federal rate = federal rate bracket applying to the last dollar of gross income.
- Monthly take-home = (gross income - total tax) / 12. All estimates use the inputs entered and do not include payroll deductions beyond the tax amounts shown.

What this calculator does not model:

- FICA (Social Security + Medicare) payroll taxes.
- 401(k), IRA, or HSA deductions that reduce taxable income.
- Itemized deductions beyond the standard deduction.
- Alternative minimum tax (AMT).
- State-specific brackets, exemptions, or credits.
- Capital gains, self-employment, rental, or investment income treatment.

EDUCATIONAL DISCLAIMER

This report is for educational and illustrative purposes only. Tax estimates use 2025 approximate federal brackets and a manual state rate. They do not constitute a tax return, IRS-approved calculations, or tax filing advice. Actual taxes depend on your full tax situation, deductions, and credits. File your Form 1040 or consult a qualified tax professional.
