MONTHLY INCOME ALLOCATION (ESTIMATED)

Total projected: CA\$11,667.00

Monthly Housing: CA\$3,888.00 (33.3%) Other Debts: CA\$0.00 (0.0%) Remaining Income: CA\$7,779.00 (66.7%)

AI-ASSISTED MORTGAGE QUALIFICATION SUMMARY

Based on combined gross annual income of CA\$140,000 and a 5.25% mortgage rate over 25 years, this scenario qualifies under standard B-20 GDS/TDS guidelines. Your GDS / TDS ratios are 33.3% / 33.3% against limits of 39% / 44%. Under Canada's B-20 stress test, qualification is assessed at the higher of your rate plus 2% or 5.25%.

Your maximum estimated mortgage qualifying amount is CA\$535,000, resulting in a maximum estimated home price of CA\$635,000 with a CA\$100,000 down payment. Estimated monthly principal and interest: CA\$3,188.00/month. Total monthly housing costs (P&I + tax + heating): CA\$3,888.00/month.

Your debt profile is within guideline limits. Maintaining your current income-to-debt ratio and building a larger down payment can improve approval terms and reduce lender risk assessments. This is an estimated qualifying capacity based on the inputs provided. Actual mortgage qualification depends on your credit score, employment history, property type, and lender-specific underwriting criteria not modeled here.

INPUTS & ASSUMPTIONS

Annual Income (Primary)	CA\$140,000
Mortgage Rate	5.25%
Amortization	25 years
Down Payment	CA\$100,000
Annual Property Tax	CA\$6,000
Monthly Heating Costs	CA\$200.00
Region	Canada

Monthly P&I Payment	CA\$3,188.00
Monthly Housing Total	CA\$3,888.00
Monthly Income	CA\$11,667.00
Total Monthly Debts	\$0
GDS Ratio	33.3% (limit 39%)
TDS Ratio	33.3% (limit 44%)
GDS Pass	Yes
TDS Pass	Yes
Qualification Verdict	Qualifies

KEY DRIVERS / POSSIBLE ADJUSTMENTS

- GDS ratio (33.3% vs 39% limit): Driven by your monthly housing costs of CA\$3,888.00. Reducing property tax assumptions or interest rate reduces GDS.
- TDS ratio (33.3% vs 44% limit): Driven by monthly housing costs plus CA\$0 in other monthly debts. Paying off a car loan or credit card before applying materially improves TDS.
- Down payment of CA\$100,000 (15.7% of max home price) is at or above 20% -- conventional (uninsured) mortgage limits apply.

METHODOLOGY

What this calculator models:

- Applies OSFI B-20 GDS/TDS guidelines. Canada: qualifying rate is the higher of contract rate +2% or 5.25% (stress test). GDS limit is 32% when down payment is below 20% (insured), 39% otherwise. TDS limit is 44%.
- Solves for the maximum mortgage principal whose stress-test (CA) or contract-rate (US) P&I payment satisfies both ratio limits simultaneously.
- Maximum home price equals maximum mortgage plus down payment. Monthly P&I shown at contract rate for payment planning purposes.

What this calculator does not model:

- Credit score, employment history, or lender-specific underwriting overlays.
- CMHC or Sagen mortgage insurance premiums (adds to mortgage balance when down < 20%).
- Property condition, appraisal, or title issues.
- Variable-rate mortgage qualifying rules or fixed vs variable payment differences.
- Strata/condo fees (may be included by lenders in housing costs).
- Seasonal or irregular income treatment.

EDUCATIONAL DISCLAIMER

This report is for educational and illustrative purposes only and applies OSFI B-20 stress-test guidelines as documented at the time of this calculator build. Actual mortgage qualification depends on your lender, credit score, property type, and current regulatory requirements. This does not constitute mortgage, financial, or legal advice. Verify qualification with a licensed mortgage professional or your financial institution.
